Module Aims

This module aims to provide students with a sound understanding of key economic concepts relevant to household and firm level decision making, as well as government policy making. It aims to provide an overview of core economic concepts of relevance to the overall economy (macroeconomy), which impact on individuals, firms and other economic actors. A range of applications and illustrations aim to provide students with a feel for key factors
influencing 'real world' decision making, as well as an appreciation of economic factors which have a profound impact on the overall macroeconomy.

Outline Syllabus

Module Learning Outcomes

On successful completion of this module, students will be able to...

1.1 Demonstrate a comprehensive understanding of how markets work and how market forces affect organisations.
1.2 Understand the conceptual basis for problem solving and decision making by a range of actors including firms, households and governments.
1.3 Develop an appreciation for the interrelatedness between national and international economies, and the impact of economy wide factors on economic entities.

2.1 Demonstrate competence in the use of economic concepts across the programme.
2.2 Critically appraise, analyse and make use of economics based concepts in order to aid decision making in business and financial organisations.
2.3 Be able to apply theory to practical decision making and problem solving.

3.1 Demonstrate further development of numerical, analytical and teamwork skills.
3.2 Plan and time manage own applied and theoretical learning.
3.3 Effectively define problems, engage in and evaluate decision making, and use appropriate verbal and written communication skills.

Learning, Teaching and Assessment Strategy

A combination of lectures and tutorials will provide students with a sound understanding of basic theory and provide suitable illustrations which would link to the 'real world' business context. Interactive tutorial sessions would be extremely useful for providing feedback on tutorial questions and for gaining key discipline skills. Such methods would enable students to relate classroom based analysis to the 'real life' decision making context faced by business professionals and managers. Weekly tutorials and seminar sessions will provide students the opportunity to apply their theoretical and conceptual knowledge to an applied context, and enable them to test their own understanding of formal concepts. Tutorials will also aid reflection, as well as critical evaluation of formal analytical methods employed by practitioners. Directed study (including completion of tutorial questions in advance of tutorial sessions) and personal reading will enhance personal transferable skills.

Assessment will be by means of an unseen, closed book examination. The examination aims
to assist students in realising the following learning outcomes (see above): 1.1-1.3, 2.1, 2.2, 3.2 and 3.3.
