Musculoskeletal and Comparative Anatomy

Module Code: ARC7037-C
Academic Year: 2018-19
Credit Rating: 30
School: School of Archaeological and Forensic Sciences
Subject Area: Archaeology
FHEQ Level: FHEQ Level 7 (Masters)

Pre-requisites:

Co-requisites:

Module Aims

To provide students with a detailed knowledge of human musculo-skeletal anatomy, with an emphasis on a functional approach to the identification and description of fragmented human remains recovered from archaeological contexts.

To provide students with the ability to identify mammalian remains to species level.

To provide students with an understanding of the survival of soft tissue remains in archaeological settings.

Outline Syllabus
Anatomical Nomenclature and Introduction to Soft Tissues
Faunal: introduction to faunal remains (lecture)
The Pectoral Girdle and Arm: Biomechanics
Faunal: fore and hind limbs
The Forearm
The Hands
The Spine and Thorax Faunal: Vertebrae, scapula, pelvis
The Pelvic Girdle
The Leg and Knee
The Feet in detail
Faunal: locomotion & feet - metapodia, phalanges, carpals & tarsals
The Cranium: Basic Structures
The Neurocranium
The Viscerocranium
The Dentition in detail
Faunal: crania, mandibles & teeth
Faunal lecture: ageing
Decomposition and preservation of soft tissues
The analysis of soft tissues

Module Learning Outcomes

On successful completion of this module, students will be able to...

1. Demonstrate a working knowledge of human and mammalian musculo-skeletal anatomy that can be used to identify faunal bones and detailed knowledge of fragmentary human remains

2. Identify and describe human remains and will have an appreciation of the development and how ontogenetic changes have influenced human anatomy

3. Identify mammalian remains to species level.

4. Understand how soft tissue can be preserved in ancient human remains.

5. Make refined observational judgements, and record and communicate findings accurately.

Learning, Teaching and Assessment Strategy

Three-hour sessions will be in the form of laboratory practicals. In weeks 1-6, 8-12 there will be a 45 minutes specimen-based formative practical quiz prior to the laboratory practical session each week. Feedback is given by the students marking their quiz with the specimens present. Students will be able to use Directed Study for reading of literature detailed in the module documentation and for researching and preparing for coursework.
