Work-based Learning and Professional Practice 3 for Healthcare Scientists

Module Code: BIS6024-C
Academic Year: 2018-19
Credit Rating: 30
School: School of Chemistry and Biosciences
Subject Area: Biomedical Science
FHEQ Level: FHEQ Level 6
Module Leader: Mrs Gillian Jaggar

Additional Tutors: Ms Kara Thornton, Dr Mojgan Najafzadeh

Pre-requisites:  
Co-requisites:

Module Aims

To further develop knowledge and understanding of the delivery of healthcare within the NHS, the role of the Healthcare science professional, the role of pathology and laboratory medicine and clinical governance. To facilitate clinical experiential learning and the development of work-based competencies as defined in the Health and Care Professions Council (HCPC) Standards of Proficiency and by Health Education England (HEE) and the Institute of Biomedical Science. To develop knowledge and understanding as applied to
these competences.

To ensure that the student will develop their laboratory skills and experience, apply and extend their knowledge, skills and experience from Year 2

To provide evidence of competence for presentation in the Institute of Biomedical Science (IBMS) Registration Portfolio for the Certificate of Competence in order to be eligible to apply for registration with the HCPC and for presentation to HEE.

All of the above are focused on service need, patient care/pathway and continuous service improvement. The module combines and integrates both academic and work-based learning and has a strong patient and clinical focus.

Outline Syllabus

The syllabus for this module is defined by the Health Professions Council Standards of Proficiency and/or equivalent HEE standards. In this module you will acquire new competencies relating to Standards of Proficiency and further develop those acquired at levels 1 and 2. (see subject specific skills)

This syllabus requires students to work directly with patients including a clinical encounter. This could be a ward/clinic visit, testing samples at the point of care, phlebotomy and interact with other healthcare professionals. Students should be able to communicate effectively with patients in the workplace with respect to patient-centered care. The standards and competencies addressed in this module will relate to the reflective statement and associated assignments and the competencies negotiated in your annual learning contract.

Module Learning Outcomes

On successful completion of this module, students will be able to...

1. To further develop knowledge and understanding of the roles of interprofessional working in the patient journey and further develop knowledge and understanding of clinical governance.

2. To critically appraise, review and reflect on the application of the competencies that you have achieved to your working environment with minimal tutor support.

3. To further develop a reflective approach to practice. To further reflect on the contribution of Life Sciences to patient care, considering how your learning will influence your future practice as a healthcare science practitioner.

4. With minimal supervision perform a range of laboratory skills adhering to health and safety regulations, and behaving in a professional manner in accordance with Good Scientific Practice.

5. With minimal tutor support demonstrate competency in the range of HCPC Standards of Proficiency and equivalent HEE standards as agreed between you, your workplace tutor and the course tutor, demonstrate knowledge and understanding as applied to appropriate competences.

6. Understand the work of the healthcare science workforce and explain how it
contributes to the patient pathways relevant to each area of their placement.

7 With minimal tutor support perform safe and secure receipt, handling, storage and disposal of biological specimens, work with laboratory information systems and perform a range of basic laboratory techniques.

8 Be able to perform a range of core methods relevant to their placement following standard operating procedures to the required quality standard.

9 Be expected to build their professional practice and practise safely in the workplace.

10 Be expected to use critical reflection to review and improve their performance in the workplace and develop skills to promote continuous professional development.

11 The content of the learning outcomes and competencies achieved will address the HCPC Standards of Proficiency 14, 10, 11, 12, 15 and equivalent HEE standards.

12 Employ communication skills, work with others, use IT Skills and apply numerical techniques.

13 Ensure that the needs and wishes of the patient are central to their care and understand the importance of developing and maintaining the patient-professional partnership.

**Learning, Teaching and Assessment Strategy**

Seminars, directed study will include experiential and theoretical learning of the range of competencies defined in the Health Professions Council Standards of Proficiency and/or equivalent HCSETB standards and the compilation of evidence to demonstrate that competency. Reflection will be further developed through the use of a learning log.
