Module Aims

To provide the theoretical framework, illustrated by appropriate case study examples, for understanding the scientific management and conversation of plant and animal populations and their habitats.

Outline Syllabus
This module will provide the scientific understanding for the management of plant and animal populations and communities to achieve particular desired outcomes. These will include the restoration of damaged habitats, harvesting renewable resources such as fisheries, the control of alien invaders, the ecology and control of weeds, and especially the conservation of species and habitats. In all cases there will be case study examples to illustrate the underlying theoretical considerations.

**Module Learning Outcomes**

*On successful completion of this module, students will be able to...*

1. use the principles gained from specific case studies to demonstrate a systematic understanding of the key aspects of ecological management and conservation issues.

2. solve different management and conservation problems, and evaluate the validity of the principles and the outcomes.

3. 1. apply critical reasoning, interpretation and evaluation
   2. communicate in a clean and concise way the results of a review of one case study which synthesises theory and professional practice.

**Learning, Teaching and Assessment Strategy**

The principal teaching method will be by lectures. The coursework assessment will involve an extensive literature review of an independently-chosen case study related to management or conservation of nature. The outcomes from this review will be verbally presented during a formative assessment in class (listed as 'Other' below) and the student will receive formative feedback from this prior to the submission of the written assessment.

Assessment 2, an unseen written examination, will be used to assess your knowledge, understanding and problem-solving skills in this area. During Directed Study hours students are expected to undertake reading to consolidate and expand on the content of formal taught sessions; research and prepare for assessments; revised material from formal taught sessions; and undertake specific elements of reading, as directed.
