Module Aims

To enable you to gain knowledge and develop skills on business data analytics. This course focuses on the uses of data analytics techniques within business and management contexts, using commercially and contextually relevant software, tools and techniques.

Outline Syllabus

The module will cover topics such as:
* Introduction to business data analytics
* The significance of data analytics to businesses.
* Big Data and Social Network Analytics
* Types of data analytics and Business Intelligence tools
Module Learning Outcomes

On successful completion of this module, students will be able to...

1. Critically appraise the significance and role of data analytics for businesses.
2. Critically evaluate and reflect on data analytics methods for businesses.
3. Evaluate and interpret data soundly; synthesise data to enhance decisions and conclusions.
4. Develop competency in the use of business analytics tools, resultant outputs and report writing.

Learning, Teaching and Assessment Strategy

Learning will be directed, supported and reinforced through a combination of lectures, computer labs and tutorials, discussion groups, as well as directed and self-directed study. Formative assessment will be provided throughout the course. To assess against Learning Outcomes, a coursework report as described in the assessment section below will be used. Appropriate feedback will be given for both elements of the assessment in accordance to the faculty required standards.

Summative assessment - You will undertake a company/business analysis report based on secondary data analysis.
