Module Descriptor

Pure and Visual Optics

Module Code: OPT4003-B
Academic Year: 2018-19
Credit Rating: 20
School: School of Optometry and Vision Science
Subject Area: Optometry
FHEQ Level: FHEQ Level 4

Pre-requisites:
Co-requisites:

Module Aims

To introduce students to the principles of geometric optics; to enable the student to apply those principles to the practice of optometry and the human eye; to describe the characteristics of optical instruments; to explain the limitations of the human eye.

Outline Syllabus

Module Learning Outcomes

On successful completion of this module, students will be able to...

1. Calculate the properties of optical systems.
2. Describe the optics of the eye and explain their impact on image quality.
3. Explain how various optical instruments work.
4. Describe what an arrangement of lenses or mirrors does to light.
5. Describe the optical principles underlying optometric practice.
6. Measure important parameters of optical systems.
7. Improve application of numbers through (i) collection, recording and presentation of data, (ii) repeated use of simple geometry and algebra.
8. Working with others towards identified targets in laboratory sessions.

Learning, Teaching and Assessment Strategy

The module is taught using (a) recorded videos and written materials for self-study (b) an extensive series of problem-solving exercises (c) a series of tutorials and seminars (d) a series of practicals. The recorded and written materials take the place of lectures. The coursework problem-solving exercises are central to the teaching of this module. Students, when ready, take or retake a test on one of 20 available topics, and are awarded up to 1.5% of the final module mark per test.

Each test is between 5 to 10 minutes long, but is not time limited. Students are regularly retested on tests they have already passed. A failed retest means the student loses the marks they previously had for that test, and must retake the test again to regain those marks. Retesting ensures that students must retain old material.

The test passes are added into a single number for the purposes of progression, but the main purpose of the tests is to provide continuous feedback on learning to the students. They are expected to use tutorial and seminar time to resolve any issues they are having with the tests of material. Practice versions of the tests are always available.
