Module Aims

This unit is intended to develop and enhance students’ clinical decision-making skills and to prepare them for work in supervised primary care practice and to develop research appraisal and presentation skills.

Outline Syllabus

The problem-plan vs database approach in clinical optometry. Legal obligations in case investigation and management. Professional decision making. Cases illustrative of the principle areas of general optometric practice including refraction,
binocular vision assessment, contact lens practice, dispensing optical appliances, partial sight, ocular disease assessment and management, investigative techniques, use and effect of drugs, occupational optometry.

Use of presentation software for audio-visual, stand-alone, printed and web-based presentations. Skills for successful presentations.

**Module Learning Outcomes**

*On successful completion of this module, students will be able to...*

1. **1.1 Analyse and manage a series of case studies involving situations which may be encountered during an eye examination, binocular vision assessment, contact lens fitting, collection and aftercare or when dispensing spectacles.**

2. **2.1 Critically analyse clinical data**

   2.2 Formulate and test hypotheses derived from clinical data

   2.3 Critically evaluate management options and formulate patient care plans

3. **3.1 Demonstrate problem-solving ability**

   3.2 Further develop team-working skills

   3.3 Create and deliver a short powerpoint presentation

**Learning, Teaching and Assessment Strategy**

The module is based on teams undertaking problem-based learning presented in tutorial sessions and a programmed distance learning course in presentation skills. The module includes a formative assessment (case presentation).

**Mode of Assessment**
