Senses, Thoughts and Movement 1

Module Code: PHA5006-D
Academic Year: 2018-19
Credit Rating: 40
School: School of Pharmacy and Medical Sciences
Subject Area: Pharmacy
FHEQ Level: FHEQ Level 5
Module Leader: Dr Ritchie Williamson

Additional Tutors:
Dr Mohammad Isreb, Mr Simon Tweddell, Dr Samantha McLean, Dr Jonathan Silcock, Dr Xiangli Liu, Gary Deakin, Mr Scott Dalgliesh, Dr Venu Vangala

Pre-requisites: Capability in Pharmacy 1 2017-18, Foundation Studies for
Co-requisites: Capability in Pharmacy 2 2018-19, Nutrition, Metabolism

Module Aims

This module builds on the Foundation Studies in Pharmacy modules and aims to provide pharmacy students with the integrated knowledge and skills needed to:

Recognise the normal structure and function of, the nervous and musculoskeletal systems, the eye, ear and skin;
Recognise important symptoms (and signs) of disease of the nervous and musculoskeletal systems, eye, ear and skin;

Explain how drugs acting on the nervous system, eye and skin work;

Identify the strengths and weaknesses of transdermal and topical drug delivery;

Understand the application of a range of health promotion theories of change that are used in the development of health promotion interventions and the role pharmacists can play in this;

Process prescriptions for patients with single health problem/disease (of the nervous and musculoskeletal systems, eye, ear or skin) managed by multiple drugs.

Outline Syllabus

The anatomical features and physiological and biochemical concepts/principles of the nervous and musculoskeletal systems, eye, ear and skin.

Interpreting normal historical, physical and laboratory findings
The strengths and weaknesses of drug delivery systems used in the nervous and musculoskeletal systems, eye, ear and skin and their effective use.

The pharmacology of drugs used in treating mental health, neurological, skin, ocular, otic and musculoskeletal problems.

Explaining the symptoms of diseases affecting the nervous and musculoskeletal systems, eye, ear and skin

Applying the theories and models of health promotion to advise on and/or prevent substance misuse, oral disease and sun-related skin conditions.

Processing multiple-item prescriptions for commonly prescribed medicines used to treat or prevent mental health, neurological, skin, ocular, otic and musculoskeletal problems.

Veterinary prescriptions

Module Learning Outcomes

On successful completion of this module, students will be able to...

1. Relate anatomical features and physiological and biochemical concepts/principles of the nervous and musculoskeletal systems, eye, ear and skin, in order to: recognise normal historical, physical and laboratory findings; assess the strengths and weaknesses of drug delivery systems and explain their effective use; explain how drugs work; explain the symptoms of disease.

2. Appraise the theories and models of health promotion and apply them in order to prevent drug misuse and lifestyle-based skin problems.

3. Process multiple-item prescriptions for commonly prescribed medicines used to
Learning, Teaching and Assessment Strategy

Students will develop the knowledge, understanding and skills necessary to meet the learning outcomes of the module through the programme’s instructional learning and teaching strategy; team-based learning. Students will study the core knowledge-based content of the module out of class; this is then assessed through a series of individual readiness assurance tests (i-RAT), which are MCQ assessments for learning taken at regular intervals throughout the academic year. Students discuss the i-RAT assessment in teams of 5-7 and retake the assessment as a team (t-RAT). In class sessions, students will apply their new knowledge to a number of formative and summative team application exercises during the academic year.

Finally, students will be assessed that they can individually meet learning outcomes through a summative module exam at the end of the stage. To pass the module, students will need to demonstrate a pass standard of 40% in the module overall and must also achieve at least 40% in the exam. Marks from the 'synoptic' written examination paper for the question that relates to nutrition, metabolism &/or reproduction will contribute to this module, as outlined in 'Assessment components and weightings'.

Supplementary Assessment for the module is as original, the only exception is for the Peer Review of Team performance component where the supplementary will be a reflection exercise.
