Module Aims

You will be introduced to the main paradigms of sociological theory and methods of sociological analysis from classical to contemporary sociological theory.

Outline Syllabus

Theoretical topics will be selected from a variety of sociological paradigms such as structuralism, functionalism, symbolic interactionism, post-structuralism and post-modernism. More specifically, the module will address the works of leading authors such as Marx, Weber, Goffman, Derrida and Foucaut. The chosen theoretical approaches will be considered in the context of particular cultural, economic, political and social issues.

Module Learning Outcomes
On successful completion of this module, students will be able to...

1. Demonstrate knowledge of underlying concepts and principles associated with classical and modern sociological theories and be able to evaluate and interpret these in a theoretical and applied context.

2. Demonstrate the ability to develop lines of argument and make sound judgements in line with basic theories and concepts of sociology.

3. Recognise and apply some of the main paradigms of sociological theory, including both microscopic and macroscopic approaches.

4. Evaluate different theoretical approaches within sociology.

5. Communicate the results of your study accurately and effectively in writing with structure and coherent arguments.

Learning, Teaching and Assessment Strategy

The lectures will provide overviews of the core principles of social theory. Since this is a first year module, it is intended to introduce you, mainly through lectures but also through in-class discussions, to the main areas of the discipline in outline rather than in depth. Discussions will allow such knowledge to be embedded, clarified and deepened. Once you have been given guidance on the overall issues through lectures, you will then deepen your knowledge through independent guided reading of relevant texts. Discussion in lectures allows you to explore concepts with each other and with the tutor. These layers of learning, practised weekly, are designed to encourage reflexivity with regard to theoretical concepts and to encourage you to draw on your own concerns and interests in applying such concepts. Written work will assess the wider learning outcomes of the module and will also allow you to test your underlying grasp of concepts by applying them in a sustained way to one particular topic and getting detailed feedback on their application. Alongside the above tools, video and the use of interactive exercises within a virtual learning environment will be embedded in the module through the use of the VLE.
