Module Aims

To stimulate a broad understanding of anatomical & functional relationships between the eye, the brain, & their supporting structures.
To develop knowledge of anatomy, physiology & immunology & their relationships to body systems including the eye. To develop knowledge of microbial causes of infection/disease & the ways in which they are diagnosed & controlled. To provide students with an introduction to the major classes of physiologically important molecules; & to introduce the function of such molecules in living cells & tissues, including the eye and related organs.

To outline the salient features of ophthalmic instrument design and to enable students to competently use clinical ophthalmic instruments as part of the optometrist`s role of assessing ocular health.
Outline Syllabus

Anatomy and physiology of the endocrine system.

Functioning of the immune system

Microbiology:

Biochemistry:
Basic structural & functional features of lipids, amino acids, proteins, carbohydrates, nucleotides and nucleic acids. Introduction to enzymes. Lipid & carbohydrate metabolism

The portfolio includes a completed record of studies in ocular anatomy & physiology & the development of practical skills in the techniques of slit lamp, indirect ophthalmoscopy, non-contact tonometry and perimetry.

Learning Outcomes

<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Describe the anatomy of the normal eye and explain its relationship to the brain.</td>
</tr>
<tr>
<td>10</td>
<td>Examine a patient’s eyes in a safe systematic manner with a selection of instruments.</td>
</tr>
<tr>
<td>11</td>
<td>Work together in small teams or with a partner.</td>
</tr>
<tr>
<td>12</td>
<td>Begin to develop communication skills.</td>
</tr>
<tr>
<td>13</td>
<td>Demonstrate teamwork skills through completion of lab work in pairs or small groups.</td>
</tr>
<tr>
<td>14</td>
<td>Improve own learning &amp; performance through reading course notes &amp; preparing laboratory reports.</td>
</tr>
<tr>
<td>2</td>
<td>Understand the design of ophthalmic instruments.</td>
</tr>
<tr>
<td>3</td>
<td>Explain the role of instrumentation for the examination of visual and ocular health.</td>
</tr>
<tr>
<td>4</td>
<td>Outline the anatomy and physiology of body systems including the eye in relation to health and disease.</td>
</tr>
<tr>
<td>5</td>
<td>Discuss microbial diversity and describe representative species of bacteria, viruses, fungi and parasites of medical importance.</td>
</tr>
<tr>
<td>6</td>
<td>Outline how micro-organisms, by their growth and activities, impact on human health.</td>
</tr>
<tr>
<td>7</td>
<td>Outline the structure, function and chemical interactions of biologically relevant molecules and their relationship with disease.</td>
</tr>
</tbody>
</table>
Recognise the fundamental anatomical and physiological substrates underlying ocular pathology.

Describe the information gained from the use of commonly used ophthalmic instruments.

**Learning, Teaching and Assessment Strategy**

The module is based on a lecture series, team-based learning activities and practical classes supported by online multimedia material.
1. The fundamental principles relating to the instruments and techniques used to assess ocular health and the anatomical and functional relationships between the eye, the brain, and their supporting structures are covered in formal lectures.
2. Practical classes are used to develop basic skills and assess competence in fundamental clinical examination techniques.
3. Practical laboratory sessions are designed to provide visual clarification of the information provided in lectures.
4. Basic anatomy, physiology, biochemistry and microbiology material will be provided via directed study of a series of online resources supported by optional tutorial sessions.
5. Additional directed study will be based on recommended texts.

*Please note: This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further information.*
detail about the module and any changes will be discussed and/or communicated at this point.
