Module Details

Module Title: Safe and Professional Radiographic Practice
Module Code: RAD4008-C
Academic Year: 2019-20
Credit Rating: 30
School: School of Allied Health Professions and Midwifery
Subject Area: Radiography
FHEQ Level: FHEQ Level 4
Pre-requisites:
Co-requisites:

Module Aims

To introduce the student to study at university, the BSc (Hons) Diagnostic Radiography programme and study skills for undergraduate learning and assessment. The module will also introduce you to concepts of professionalism, ethics and safety, considering the needs of the service user at all times.

Outline Syllabus

Induction to: the programme, Faculty and University. Regulations and procedures. Support
Learning Outcomes

1. Identify the skills, values and behaviours of a professional practitioner as defined by the Health Professions Council in the Standards of Proficiency for Radiographers.
2. Understand your own responsibilities for safe inter-professional practice with awareness of human factors and apply the principles of Mandatory Pre-Practice Placement Training (MPPPT).
3. Demonstrate awareness of relevant regulations.
4. Understand the importance of Education for Sustainable Development (ESD) and what it means to you as a student.

2.1 Understand the role of the diagnostic radiographer, as part of a team, providing high quality care for patients and other service users including those with dementia.
2.2 Apply the Health and Care Professions Council `Guidance for Students on Conduct and Ethics for Students` to clinical practice and university.
2.3 Recognise the sources and hazards of ionising radiation.
2.4 Understand the importance of radiation protection and employ appropriate processes both in clinical practice and at university.

3.1 Communicate effectively with patients and carers.
3.2 Demonstrate basic levels of communication with health care professionals.
3.3 Use mathematical principles in support of science and technology throughout the course.
3.4 Use developing skills in academic writing, reflection and use the Harvard Referencing System effectively.
3.5 Present, evaluate and interpret qualitative data, develop lines of argument and make sound judgements.
3.6 Self assess your personal transferable skills and create an action plan of how you will implement strategies for improvement.

Learning, Teaching and Assessment Strategy

Lectures will prepare students for life and study at university, including approaches to problem solving. Students will learn principles which will prepare them for their first clinical placement, including mandatory subjects required for practice and high quality patient care. This will enable them to practice safely by protecting themselves and patients whilst in the
clinical environment from ionising radiation and other health hazards. Seminars and Tutorials students will work with their tutor and peers to gain feedback enabling development of their individual study skills and prepare for future assessments. Practical: Mandatory health and safety training and simulated clinical learning will utilise clinical skills facilities. Directed study: directed reading and learning. Online will include MPPPT e-learning material and NHS Tier 1 dementia training. Other is practice placement. Students will be required to undertake training and complete tasks to demonstrate the practical and safe application of ionising radiation and employment of radiation protection. Assessment is in three parts: an assignment to demonstrate understanding of professional issues and evidence of developing academic investigation and writing skills including effective use of the Harvard Referencing System (learning outcomes 1.1, 1.2, 1.4, 2.1, 2.2, 2.4, 3.1, 3.2, 3.3, 3.4); an exam assessing the ionising radiation and protection elements of the module (learning outcomes 1.3, 2.3, 2.4, 3.3) submitted firstly as a formative submission in semester 1 and in semester 2 as a summative submission. Course based discussion of the science and practice of Radiography and an MCQ Examination on Ionising radiation and protection

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
