

Module Details				
Module Title	Introductory Microbiology			
Module Code	BIS4013-B			
Academic Year	2021/2			
Credits	20			
School	School of Chemistry and Biosciences			
FHEQ Level	FHEQ Level 4			

Contact Hours				
Туре	Hours			
Lectures	28			
Practical Classes or Workshops	4			
Laboratories	12			
Independent Study	154			

Availability				
Occurrence	Location / Period			
BDA	University of Bradford / Semester 2			

Module Aims

To provide students who may have little or no background in Microbiology with an introduction to the nature of microbes and the microbial world. To provide students with practical experience of basic microbiological procedures including aseptic technique and key tests for bacterial identification.

Outline Syllabus

This module will provide an overview of the microbial world, including discussion of the structure and function of prokaryotes, nutritional and physiological requirements and environmental factors affecting growth. The nature and structure of viruses including bacteriophage will be covered. The interactions between microbes and humans will be studied including: the role of human commensal flora; bacterial, fungal and viral diseases and their prevention. Life cycles, epidemiology, pathological effects and control of protozoa and other parasites responsible for important diseases of humans will also be discussed.

Industrial uses of micro-organisms, food microbiology, nutrient recycling and the importance of microbes in biodegradation of wastes and pollutants will be studied. The module also introduces bacterial genetics, including: structure and replication of prokaryotic DNA; transcription; translation; mutations and transfer of genetic information between bacteria.

The isolation, growth and identification of microbes will also be covered. There will be a practical introduction to the isolation/identification of bacteria and fungi by biochemical and staining techniques; aseptic culture transfer and enumeration techniques. The effect of temperature on bacterial growth and survival will also be studied.

Learning Outcomes				
Outcome Number	Description			
01	Show evidence of some breadth and depth of understanding of the fundamental concepts of microbiology (HCPC standard 13).			
02	Show evidence of understanding the structure and function of the human body, relevant to microbiology, and explain the relationship between health, disease, disorder and dysfunction (HCPC standard 13).			
03	Conduct basic microbiological experiments in a safe and effective manner, following clear instructions and accurately record data using appropriate scientific conventions (HCPC standards 3, 15).			
04	Demonstrate personal responsibility for self-directed learning, including self-management of workload and resources (HCPC standards 1, 3).			

Learning, Teaching and Assessment Strategy

Information outlining the knowledge and understanding required for this module is delivered in lectures and workshops. Information is reinforced by laboratory sessions. Feedback is given orally both in interactive workshops and in the practical sessions. The laboratory sessions also provide the opportunity to gain experience in basic microbiological techniques and involve working in small groups, recording and interpreting data, working to deadlines and employing communication skills. An online coursework test is used to assess the theory behind the practical lab sessions and the laboratory skills are assessed in a practical laboratory based assessment. The formal exam will assess the wider theoretical knowledge outlined in the module descriptor. Reassessment of failed elements will be as per the initial method of assessment. Where reassessment of the practical element is required, students will be given a data set or an opportunity to complete the practical on an alternative occasion, whichever is more appropriate.

Mode of Assessment					
Туре	Method	Description	Weighting		
Summative	Examination - MCQ	Assessment (MCQ & short answer questions) (LO 1-4) (1.5 Hrs)	60%		
Summative	Examination - MCQ	Online MCQ theory test based on practical classes (LO 1,2,4) (1Hr)	20%		
Summative	Examination - practical/laboratory	Laboratory skills, Practical assessment (L01,2,4) (2 Hrs)	20%

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
