

Module Details		
Module Title	Introduction to Computing	
Module Code	COS3003-B	
Academic Year	2021/2	
Credits	20	
School	Department of Computer Science	
FHEQ Level	RQF Level 3	

Contact Hours				
Туре	Hours			
Lectures	12			
Laboratories	8 and 4			
Directed Study	176			

Availability		
Occurrence	Location / Period	
BDA	University of Bradford / Semester 2	

Module Aims

To introduce foundational concepts relevant to the field of Computer Science.

To develop practical computing skills through laboratory exercises and/or case studies

Outline Syllabus

Transferable and technical skills/competencies expected from a computing professional Foundational mathematical concepts underpinning computer science Introductory programming and algorithmic thinking Design and engineering for the creation of software systems Hardware and software of modern computer systems Technologies and languages underpinning the Internet

Learning Outcomes				
Outcome Number	Description			
01	Describe and use basic computing terminology and concepts			
02	Demonstrate understanding of theoretical concepts that underpin the discipline of computing			
03	Apply practical computing skills to a variety of real world application areas			

Learning, Teaching and Assessment Strategy

The module is taught using a mixture of lectures that deliver theoretical concepts and terminology, as well as practical lab sessions that build upon I to develop practical skills in a variety of computing topics. The module is assessed through two pieces of coursework, one delivered part way through the module to facilitate timely feedback on student progress and attainment, and a second coursework

Formative feedback on student work and attainment is given through weekly lab sessions where tutors will work closely with students on weekly practical exercises, allowing staff to guide student learning in a real-time manner.

Mode of Assessment				
Туре	Method	Description	Weighting	
Summative	Coursework	An essay requiring the demonstration of knowledge and understanding of theoretical concepts and ability to solve CS prob	70%	
Summative	Coursework	An exercise involving the design and/or development of computer software (1200 words or equivalent)	30%	

Reading List

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
