

Module Details	
Module Title	Foundation in Human Biology
Module Code	HES3001-B
Academic Year	2022/3
Credits	20
School	School of Allied Health Professions and Midwifery
FHEQ Level	RQF Level 3

Contact Hours	
Type	Hours
Lectures	30
Interactive Learning Objects	10
Independent Study	160

Availability	
Occurrence	Location / Period
BDA	University of Bradford / Semester 2

Module Aims
To develop student's knowledge, understanding and implications of the function and dysfunction of the human body.

Outline Syllabus
<p>This module will focus on the anatomy and physiology of the human body, including the following organ systems: digestive, reproductive, renal, respiratory, nervous, musculoskeletal, cardiovascular, endocrine, and the immune and lymphatic system. The role of the cell, homeostasis, healing and inflammation, pain, nutrition and diet, and the aging process will also be examined.</p> <p>Common long-term health conditions e.g. obesity, diabetes, heart disease, chronic obstructive pulmonary disease, dementia, depression anxiety, HIV/AIDS may be studied. This will include the signs and symptoms and how they relate to the underlying biology, predisposing factors, pathogenesis, diagnosis, treatment, and prognosis.</p>

Learning Outcomes	
Outcome Number	Description
01	Describe the normal functioning of the major body systems and their control.
02	Explain the mechanisms, manifestation and management of specific disorders related to your area of interest.
03	Identify the biopsychosocial impact of having a long-term condition on a patient.
04	Recognise the impact of medical investigation, management and rehabilitation pathways for specified conditions related to your area of interest.

Learning, Teaching and Assessment Strategy
<p>This module will focus on the anatomy and physiology of the human body, including the following organ systems: digestive, reproductive, renal, respiratory, nervous, musculoskeletal, cardiovascular, endocrine, and the immune and lymphatic system. The role of the cell, homeostasis, healing and inflammation, pain, nutrition and diet, and the aging process will also be examined.</p> <p>Common long-term health conditions e.g. obesity, diabetes, heart disease, chronic obstructive pulmonary disease, dementia, depression anxiety, HIV/AIDS may be studied. This will include the signs and symptoms and how they relate to the underlying biology, predisposing factors, pathogenesis, diagnosis, treatment, and prognosis.</p>

Mode of Assessment			
Type	Method	Description	Weighting
Summative	Coursework - Written	Coursework outlining a 1 patient conditions - 1500 words	50%
Summative	Examination - MCQ	Multiple choice questions (MCQ) (1 Hr)	50%

*Please note:*

*This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.*
