

Module Details			
Module Title	Brain and Behaviour		
Module Code	PSY4009-B		
Academic Year	2023/4		
Credits	20		
School	School of Social Sciences		
FHEQ Level	FHEQ Level 4		

Contact Hours				
Туре	Hours			
Laboratories	8			
Lectures	22			
Directed Study	170			

Availability		
Occurrence	Location / Period	
BDA	University of Bradford / Semester 1	

Module Aims

This module will introduce the major psychological theories and concepts that explain how we become thinking individuals. You will explore the basic organisation of the nervous system from neuronal cells to global anatomy, and the physiology of the human sensory system including vision, olfaction, gustation and tactile perception. You will also learn about the neuropsychology of learning and memory, including attention, eyewitness testimony, and theories of forgetting. We will also explore how we understand spoken and written language, and psychological theories of personality.

Outline Syllabus

Types of learning and memory systems: How we perceive and attend to information, and categorise it to aid learning. Short-term, long-term, and working memory. Theories of forgetting and eye witness testimony. Cognition in the real world. Understanding language; comprehension and reading. Basic anatomy and physiology of the central and peripheral nervous system. The physiology of the human sensory system. The scientific bases of personality development. Neuropsychological and cognitive research techniques.

Learning Outcomes				
Outcome Number	Description			
01	Describe the major psychological theories of learning and memory comprehension in humans;			
02	Describe the physiology of the human nervous and sensory systems;			
03	Describe the main functions of language comprehension;			
04	Describe the major scientific theories of personality development and individual difference;			
05	Follow standard protocols to carry out a simple experiment on cognitive processes with human subjects;			
06	Collect and analyse basic experimental data;			
07	Write a simple research article and accurately summarise results.			
08	Demonstrate ICT skills to prepare written reports;			
09	Seek out web-based information.			

Learning, Teaching and Assessment Strategy

Lectures will be used to: introduce anatomical structures and organisation of systems within the brain; explain theories of learning and memory; language comprehension, and personality (LO 1 to 4). Practical sessions will be used to explore simple physiological, learning, memory, and individual difference concepts, allowing you to test theories and ideas on each other (LO 1 to 7). From these you will have an opportunity to prepare a research article on an experimental assessment of a learning concept (LO 5 to 9).

Mode of Assessment				
Туре	Method	Description	Weighting	
Summative	Coursework - Written	Written assignment	50%	
Summative	Computerised examination	Unseen closed-book examination: 30 multiple choice questions and answer 2 of 4 short answer questions (1.5hrs)	50%	

Reading List

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
